

## **CREDANT® Mobile Guardian Group Edition** *Mobile Security and Management Solutions*

### **Mobile and wireless devices improve productivity, but at what cost if compromised?**

Gartner states that mobile email and personal information management (PIM) has already penetrated 65% of organizations. By the year 2005, 40% of corporate data will reside on handheld devices. Driven by user demand, mobile computing has accelerated faster than IT departments can create and implement a cohesive plan to secure and manage mobile users, data and devices. However, if inadequately protected, mobile information that is wrongfully disclosed may expose your organization to legal liability, financial loss and brand damage.

Challenged to meet the demands of mobile workers, organizations are embracing departmental security solutions to minimize risk and provide basic management functions. Recognizing the need for a decentralized departmental solution, CREDANT Technologies has introduced CREDANT Mobile Guardian (CMG) Group Edition. Unlike point solutions, CMG Group Edition can be easily upgraded to CREDANT's award-winning CMG Enterprise Edition to leverage your enterprise directory and IT infrastructure in the future.

CMG Group Edition was designed for departments/specific initiatives within large organizations or small-to-midsize enterprises that have limited IT resources, but need to minimize risk while providing centralized policy definition and creation for mobile workers. In addition, you can be assured that CREDANT solutions will continue to meet your enterprise security and management requirements as you expand the use of mobile and wireless computing throughout your organization.

### **Building value through mobile and wireless security**

CREDANT Technologies® is the market leader in providing software that enables an organization to control security for mobile workers. CREDANT's award-winning security and management software platform protects mobile devices, wireless access and the enterprise from rogue mobile devices, making it safe for organizations to use mobile and wireless technologies to increase employee productivity.

### **Why CREDANT Mobile Guardian Group Edition?**

- **Protect mobile devices and applications** – safeguard against legal liability, financial loss or brand damage if mobile devices are lost or stolen with enforced passwords, data encryption and automatic fail-safe “kill” options
- **Cost-effective and easy to administer** – quickly deploy comprehensive centrally-defined security policies that protect your mobile users, devices and data — minimize security risk and restrict application use, disable peripherals, and prevent the use of communication ports and storage cards
- **Broad platform support** – architected to protect diverse types of mobile devices from a single graphical user interface
- **Elegant upgrade path** – know that future enterprise security and management requirements can be met with CREDANT Mobile Guardian Enterprise Edition
- **One-stop solution** – optional backup and recovery, software imaging and personal firewall components are also available through CREDANT Technologies
