Healthcare Solution

Secure & Simplify Clinical Workflows

one

MAKE YOUR CLINICIANS HAPPY WHILE ENSURING COMPLIANCE

The rapid transition from a paper-based healthcare environment to an environment where everything exists online has forced healthcare to change the way it does business. Increased regulatory demands coupled with financial incentives have forced constant change in this new environment. Our healthcare solution is designed to embrace this ever-changing environment while at the same time keep your clinical systems secure and your clinicians happy. Our healthcare solution is designed to be turn-key.

The 2FA ONE solution is a single product installation that provides advanced authentication and robust security measures, while satisfying users with an intuitive, streamlined experience. Hundreds

of hospitals around the world actively use 2FA's healthcare solution to satisfy HIPAA, HITECH, e-Prescription, and other regulatory demands. Our healthcare solution is uniquely tailored to clinical workflows.

You will be happy to learn there is a strong authentication solution on the market that not only is easy to understand, deploy, use, and maintain, but is also convenient, cost-effective, and enhances the manner which healthcare workers interact with clinical applications.

Scalable and flexible, 2FA's technology has been proven from small installations of a few dozen users, to very large deployments of over a hundred thousand users with minimal impact to network speed.

ONE PRODUCT CAPABILITIES

- PASSWORD REDUCTION AND ELIMINATION
- PROXIMITY CARD AUTHENTICATION
- SMART CARD AUTHENTICATION WITH PKI
- KNOWLEDGE-BASED AUTHENTICATION
- TRANSACTION-BASED AUTHENTICATION
- TWO-FACTOR REDUCED SIGN-ON
- SELF-SERVICE PASSWORD RESET
- ADVANCED AUDITING AND LOGGING
- SMOOTH ROAMING BETWEEN SYSTEMS
- ENHANCED SECURITY FOR KIOSKS AND SHARED WORKSTATIONS
- ENABLES ENCRYPTION AND DIGITAL SIGNATURES
- AUTO DESKTOP LOCKING
- FAST-USER SWITCHING & CITRIX® HOT DESKTOP
- FUNCTIONALITY ON WIN 7

Tap-in, Tap-out It's that simple!

RISK APPROPRIATE AUTHENTICATION

2FA ONE utilizes the latest technology to take advantage of the investment your organization has already made in physical access by leveraging the same proximity card technology used by employees to unlock and open doors, to unlock and open Windows®.

Employees understand their badge is a security tool utilized to authenticate who they are by tapping their badge on a proximity card reader located adjacent to a secured door. The employee simply taps their badge on the reader and once authenticated the door opens. This same behavior can now be used to authenticate employees to Windows®, thin-clients, zero-footprint clients, local and remote applications, Citrix®, and to perform transaction-based authentication. The employee simply taps their badge on a proximity reader connected to the computer and they are authenticated. A PIN may be used in conjunction with the badge to provide stronger, two-factor authentication.

2FA ONE is also able to issue, manage, and authenticate smart cards using PKI. Our patent-pending technology enables healthcare workers to use smart cards in the same manner as a proximity card by tapping in and out!

2FA ONE INSTANTCONNECT

Desktop and application visualization provided by Citrix® and VMware® has significantly enhanced clinical workflows. Speed of access is critical for clinicians to effectively and efficiently perform their responsibilities.

MAKE PASSWORDS HISTORY WHILE INCREASING SECURITY AND EMPLOYEE PRODUCTIVITY

2FA ONE InstantConnect enables clinicians to easily and seamlessly perform secure, fast user-switching and direct authentication to Citrix® XenApp and XenDesktop, as well as to VMware® View. Scan the QR code for a brief introduction to how one InstantConnect can:

- Save clinicians time by not having to use passwords to logon to the operating system or applications.
- Immediately secure kiosks and point of care systems that are traditionally left unsecure or logged on with a generic user account.
- Enhance logging and auditing by recording who accessed which systems and applications, when they accessed each, and what method they used to authenticate.

Citrix® ready™ Desktop and application virtualization has significantly enhanced healthcare workflows. 2FA ONE builds upon this enhancement and streamlines strong authentication to virtualized systems. 2FA ONE has undergone independent certification by Citrix® to ensure that 2FA ONE works seamlessly with Citrix® products.

Verified by Veracode®
When selecting a software product, it is critical that the software itself is secure. 2FA ONE is the only strong authentication solution to continuously undergo rigorous third-party validation by Veracode . 2FA ONE exceeds Veracode's AL5 (mission critical for business/safety of life and limb) analysis prior to every release.

SC Magazine® 5-Star Award - 2FA ONE has received awards and accolades from industry leading analysts and trade journals such as SC Magazine.

The Password Problem

Tap-in, Tap-out.

Emergency Access

InstantConnect

ONE for compliance
ONE to replace passwords
ONE for single sign-on
ONE to InstantConnect
ONE to deploy

About Us

2FA Inc. is an Austin, Texas based, veteran-owned, software company created on the single vision of simplifying strong authentication. Since 2006, 2FA has been at the forefront of technological advances in security and authentication, with several industry “firsts”.

2FA has developed a long standing partnership with HID Global to market the technology in 2FA ONE under the trade name naviGO, a comprehensive authentication solution that not only enabled users to open doors as they had traditionally done with their HID card technology, but also open Windows®. Like 2FA ONE, naviGO also provides robust kiosk management, two-factor reduced sign-on to applications, transaction-based authentication, and enhanced X.509 certificate management capabilities - all within a single and simple to use application.

Today, as 2FA continues to grow and develop strong authentication software, the professional services team assists our clients with services designed to complement the 2FA ONE capabilities in healthcare, law enforcement, and enterprise environments. 2FA’s unique position as a software development company with deep experience and expertise in strong authentication makes 2FA a perfect choice to satisfy a broad range of strong authentication requirements.
